TEN SEFIROT

for

Piano and Electronics

(2021)

Notes on Performance

CUES: 1, 2...13

The underlined numbers above the stave designate the *Cue* number.

ELECTRONICS

2 microphones

Mic.1 & Mic.2, (DPA or any other 'close' mics) to be placed close to the strings of the piano. Mic.1 will capture high and Mic.2 low registers.

Audio Interface

2-mono in/8 mono-out

Computer

(Apple Mac Book Pro with OSX 10.15 or later)

Software

Ten Sefirot for Piano and Electronics.app (standalone performance application)

Audio mixer

(takes 2 Mic inputs and outputs 8 channels routed to 8 speakers around the audience)

Eight speakers

8 speakers (1-8) in clockwise direction around the audience

Smartphone Camera/
or Camcorder

Any smartphone camera with **Bluetooth** protocol can be used to send the video capturing wirelessly to the computer. **The distance between the smartphone and the computer should not exceed 10 meters.** Alternatively a camcorder can be connected to the computer using a **USB** cable.

1 technician

a person sitting at the mixer, who will be responsible for:

- activating and deactivating the microphones
- controlling the work of the computer during the performance — pressing the **space bar** to set the following cue and activate the software instrument associated with that number
- controlling the balance between the sound of the piano, the sound coming out of the microphones and processed in real-time by the computer, and the sound of the pre-processed soundfiles stored into the computer's hard-drive.

Duration: 24 minutes

Stage Setting and Equipment

Equipment (Audio and Computer)

2 mono microphones, one placed at the high (Left), the other at the low (Right) register of the piano should be routed either directly (not recommended) or through a mixing desk to the two mono inputs of the audio interface;

Audio interface and loudspeakers: 8 mono outs should be connected to a mixing desk and from there routed to the eight speakers around the audience. The numbering should be in a clockwise direction (1-8) with No.1 at Left-Front. No.2 should be at Right-Front and the remaining speakers should close the circle at No.1. No speaker should be placed behind the piano (placed at the front of the audience). The sound of the piano need no extra amplification. Balanced cables should be used.

The **audio interface** has to be connected to the **computer** via **USB/Firewire** cable. The appropriate 'driver' for the **audio interface** has to be installed so the computer can 'see' it.

Equipment (Smartphone camera or camcorder) *see FIGURE 1

Any smartphone camera with **Bluetooth** protocol can be used to send the video capturing wirelessly to the computer. The distance between the smartphone and the computer should not exceed **10 meters**. To connect the device enable the **Bluetooth** connection in both the smartphone and the computer. If a smartphone camera is used, it has to be mounted on the piano, vertically above the keyboard at a height above pianists' head and positioned 'face-down' in a such a way to capture exactly the entire piano keyboard — from the bottom to the top white key. **A strong clip can be used to fix the smartphone selfie-stick to the piano and attached either to the piano's lid or the Music Rack's base.**

If a camcorder used, it has to be placed on a tripod at a height above pianist's head and positioned in such a way to capture exactly the entire piano keyboard — from the bottom to the top white key.

Connecting the Equipment (audio equipment, audio Interface, smartphone camera/camcorder, computer and software)

Once the communication between the audio interface and the computer has been established, launch the ***Ten Sefirot for Piano and Electronics.app*** software. This standalone application doesn't need any additional drivers and it should work on any computer. **Detailed instructions about how to enable both the audio interface and the smartphone camera (camcorder) from within the software are given at the application's main window/interface.**

Pianist's Hands (* see FIGURE 1)

In order to allow the single camera to track both of performer's hands independently the **back of the pianist's hands** need to be marked with different colour — by either using a marker or applying very thin stickers on the back of the hands, if the pianist is comfortable with that. If markers are used, the pianist can draw a circle (1/2-inch in diameter) anywhere on the back of each of his/her hands. Any two colours can be used, however **green** and **blue** are the safest as they make a good contrast to the skin colour. **NOTE: neither of the two colours used should appear on the pianist's hands or arms as the software will track these colours wherever they appear in the video captured.**

FIGURE 1

Performance

1. Drop the application *Ten Sefirot for Piano and Electronics.app* on the computer's Desktop (or anywhere convenient) and launch it.

2. In DSP Status:

Set the appropriate audio driver, input, and output sources;

Set the Sampling rate to 44100

I/O and Signal vector size to 512

Max Scheduler in Overdrive and Scheduler in Audio Interrupt to "ON"

3. In the left upper corner of the main patch (INPUTS:MICROPHONES) double-click on the IO object and from the popup menu on the left choose "Audio input".

4. The performance of the work require an audio/computer technician — a person sitting at the mixer and controlling the microphones, the computer during the performance, the balance among the piano sound and the real-time processing.

Detailed instructions about how to start using the software application and engage the audio interface and the smartphone camera (camcorder) are given in the **application's main window/interface**.

How It Works (* see FIGURE 2 & FIGURE 3)

The smartphone camera (camcorder) tracks the pianist hands's movement with respect to the piano keyboard's octave/register. The user can pick the colour/hue to be followed by clicking on the actual colour inside the video showing the hands and the keyboard. The colours chosen are shown in the two smaller windows — the one to the left for the left hand and the one to the right for the right hand (**Figure 3**). The location coordinates of a colour region of each of the hands are sent to particular MaxMSP-Jitter patch with virtual 'instruments'. The data coming from the smartphone camera (camcorder) is first conveniently scaled and converted into streams of variables and routed to the 'mapping area' directly controlling the parameters of sound synthesis and processing as well as multi-channel spatialisation in real-time (**Figure 2**).

Programme Notes

As in many other compositions, my main creative interest in this work is closely related to- and influenced by, the study of cognitive science and anthropology — the parallelism of structures between musical processes on the one hand and the processes of culture-coloured consciousness on the other. In this case, I have made an attempt to bring some ideas stemming from the ancient tradition of *Kabbalah* ('reception' or 'tradition' from the school of thought in Jewish mysticism). Its teachings define the inner meaning of the Hebrew Bible through one of the fundamental kabbalistic texts, the Medieval Zohar, which was first published in the 13th century. *Kabbalah* sees the human soul as mirroring the Divine (after Genesis 1:27, "God created man in His own image, in the image of God He created him, male and female He created them"), and more widely, all creations as reflections of their life source in the *Sephirot*. The *Sephirot* are considered revelations of the 'Creator's Will' and they should not be understood as ten different "gods" but as ten different ways the one 'God' reveals his 'Will'. Underlying the structural purpose of each of the *Sephirot* is a hidden motivational force which is understood best by comparison with a corresponding psychological state in human spiritual and cultural experience.

As the ten *Sephirot* are a step-by-step process illuminating the 'Divine plan' as it unfolds itself in 'Creation', the 'Infinite Light' is 'dispersed' among this collection of miniatures representing metaphorically an acoustic reflection of that process. I have been driven by the *Sephirot*'s 'light refraction' and used it as a metaphor to develop a musical form consisting of separate short movements based on a simple melodic phrase, each of which originates from the rich folk musical tradition of the Slavic people living in the south-east region of Europe – and predominantly the Balkan peninsula (North Macedonia, southern part of Serbia, Bulgaria and northern parts of Greece). The 'sonic illumination' starts from the first of the *Sephirot* – *Keter* (above-consciousness) and its five-tone 'rubato' song and continues through *Hokmah*'s (wisdom) slow dance phrase, *Bina*'s (understanding) rhythmic character, *Hesed*'s (kindness) lullaby-like motive, *Gevurah*'s (severity) 'impressionistic' mode, *Tiferet*'s (beauty) tonality-bound traditional phrase, *Netzah*'s (Eternity) folk dance, *Hod*'s (Splendour) marching rhythm, *Yesod*'s (Foundation) 'elegy', to the last one – *Malkuth*'s (Kingship) emotional pathos. The eleventh miniature from this collection, *DA'AT* (Knowledge of Good and Evil) is the location where all ten *Sephirot* are united as one — metaphorically represented by the extremely simple melody consisting of three tones in downward motion very common in the folk music from the region described above as well as across many other cultural traditions around the world.

BINA
for
piano and electronics

The musical score is divided into three systems, each with four staves. The first system includes staves for Piano, Electronics, Pno., and El. The second system includes staves for Pno., El., and two additional staves. The third system includes staves for Pno., El., and two additional staves. The score is written in 8/8 time with a tempo of 120. The key signature is one flat (B-flat). The score includes various musical notations such as notes, rests, and dynamic markings (f, ff, sfz, mf). The Electronics part includes a box labeled 'Cue No. 4'. The Pno. part includes a box labeled 'Pno.'. The El. part includes a box labeled 'El.'. The score is written in a professional, clean style with clear notation and a well-organized layout.

The musical score for 'HOD' is written for piano and electronics. It consists of two systems of staves. The first system features a Piano staff and an Electronics staff. The Piano part begins with a tempo of 74 (♩ = 74) and a dynamic of *f*. The Electronics part has a 'Cue No.9' marker. The second system features a Piano staff and an Electronics staff. The Piano part continues with dynamics of *ff*, *f*, *ff*, and *f*. The Electronics part is marked with a '9' at the beginning of the staff.
